Date	Time	What?	Where?
06 th March	08:30 - 09:20	Isolation Open/Close - Boulder Final - Female & Male	Perekopskaya str, 34
	09:30	Boulder Final - Female Technical break 15 minutes Boulder Final - Male	
	13:00	Speed Final (single route) First Female - 3 attempts then Male - 3 attempts	
	15:00	Awarding Ceremony	

SHORT FACT SHEET ABOUT BOULDER COMPETITIONS

(in accordance with the UIAA 2022 competition regulations for International Ice Climbing Competitions)

- All Boulder competition routes will be climbed on top rope.
- A route shall be considered successfully completed if it is climbed in accordance with the regulations and rules governing Boulder competitions and the competitor put both ice-axes on the finish point (last blue hold).
- Time is indicated by a good audible tone. After the tone the climber shall reach the starting position prior to climbing.
- Starting position is defined when every part of athletes' body leaves the ground and places both ice axes in a blue start hold.
- An attempt will be counted each time every part of the competitor's body has left the ground.
- In case of a fall or if the Category Judge is instructing a competitor to stop climbing, the highest point reached with the ice axe (or in the case of a traverse or roof section of a route, the furthest point reached with the ice axe), in the line and in the climbing sequence of the route as determined by the Chief International Route setter, shall be measured. The criteria for measurement is the marked zone/hold. The zone/hold is valid, if two axes are inside the zone/hold, or one axe is in the zone/hold and the other ice axe left the previous zone/hold.

Qualification, semi-final and final rounds: will be 4 routes for men and 4 route for women. The climbing time is 4 minutes and 1 minute for the transition. There will be two isolation zones in the venue: main and intermediate. The participants of the competition cannot watch the climbing of the routes by another athlete. Routes observation will be for qualification and semi-final. The final round will be without observation.

RANKING AFTER EACH ROUND OF THE COMPETITION

1. A zone can be defined as a hold, or an area of the route considered by the route setters or judges and will be marked distinctive to other zones. A route/problem can have multiple zones. Top of the route is also considered a zone. Each zone as well as the top point has a total value of 1000 points. The effective value of each zone is the total value divided by the number of climbers who reached that zone until the end of the round.
2. The result of a round for each climber on each problem is the sum of the effective values of each zone. In the end of the round the total points of a climber is the sum of all the points for all the routes/problems.
3. The competitors will be ranked from the highest to lowest points.
4. If two or more athletes have the same number of points, the number of attempts to reach the highest zone (the attempts after reaching the maximum height are not taken into account) is decisive for his/her ranking: the competitor with less attempts are being ranked ahead. It is not necessary that the highest zone to be the top of the route, but the highest zone that was achieved by all the competitors in that problem/route.
